

Weekly Progress Report

Jionglin Tao

120109498

What I have done:

1. Read the section 1 to section 6 of draft page. To understand the Bloom Filter + Witness and the encode and decode algorithm.

2. Read the some bloom filter demo code on github. Try to implement a simple demo.

Questions:

1. What programming language is better to implement? I'm thinking of using java or python to implement.

2. Could I use an existing public bloom filter demo and modifying it?
